

# **CAAP Statistics Final Project-2**

## **Exploratory Data Analysis**

**Write your name here**

# Understand your data

- **Here you can summarize the columns, any external information that helps better understand your data**
  - **Whether it is experimental or observational?**
  - **Whether it is numerical/categorical**
  - **What does each column mean?**
  - **How the data has been collected?**
  - **Is there any potential issue you might need to consider about data generation process?**

# Summary Statistics

- **For each column, try to summarize the data— use both graphical and numerical summary method**
  - **Is it symmetric/skewed?**
  - **Any outliers? Why?**
  - **Any correlations?**
  - **Any missing values?**

# Potential Questions

- **Based on summary statistics, try to list up as many as potential questions from the data— this questions might differ from the one you think of at step 1.**
